PERSONAL PROJECTS

My Portfolio (06/2022 - Present)

- Full Stack Website with Blog Page using a CRUD Operation for Blog Post and Dynamic Post, migrated to MySql Database.

ABOUT ME

The primary focus of my studies in web development has been HTML, CSS, Bootstrap, Javascript, JQuery, and some PHP. I have created multiple websites and I have also volunteered my time to gain professional level experience using these skills. I recently turned my focus to furthering my php skills by working more with Laravel for backend and MySql for database and learning Vue JS for my front end.

I possess knowledge in modern web design concepts like mobile first designs, cross browser compatibility, search engine optimization and page optimization.

One of the first websites I created was my Portfolio with Blog a Full Stack Web, with HTML CSS Bootstrap Template I made from scratch and Integrated to my Laravel App, and connected to my database MySql using Xampp.

I have an excellent understanding of the inner workings of wordpress where I am comfortable with and enjoying coding with other languages as well.

Plenty of daily use with Git for version control via Git Bash command line interface backing up my work to Github on a regular basis.

When I have a plenty of time before or after my class I code a lot and watching tutorials in Udemy and Youtube to learn more and become a success Full Stack Developer someday.
